Claims Text - CLTX (29):

27. The system of claim 25, wherein the operating system configuration parameters indicate a remote server on the <u>network</u> including the operating

system **kernel**, further wherein the program code is further capable of causing

the client computer <u>processor</u> to perform during the initialization:

the operating system <u>kernel</u> from the remote server indicated in the operating

system configuration parameters; and loading the downloaded operating system

kernel into the client computer.

Claims Text - CLTX (44):

42. The program of claim 40, wherein the operating system configuration parameters indicate a remote server on the <u>network</u> including the operating

system **kernel**, wherein the program code is further capable of causing the

processor to perform: **downloading** the operating system **kernel** from the remote

server indicated in the operating system configuration parameters; and loading

the downloaded operating system kernel into the client computer.

--	-------------	--

Claims Text - CLTX (6):

5. The computer of claim 1, wherein the initial boot sequence comprises at

least one or more of: hardware detection, and <u>kernel loading</u> without <u>network</u>

device drivers loading.

Claims Text - CLTX (7):

6. The computer of claim 1, wherein the initial boot sequence is also executed by a basic input/output system (BIOS) in conjunction with the operating system, and comprises at least a boot <u>loader process</u> without hardware

profile selection, and <u>kernel loading</u> without <u>network device</u> drivers loading.

Claims Text - CLTX (14):

13. The method of claim 12, wherein the pre-log-in boot sequence comprises:

a power-on self-test (POST); an initial start-up process; a boot loader process without selecting the hardware profile; operating system

selection;

hardware detection; configuration selection; and, <u>kernel loading</u> without <u>loading the network device</u> drivers.
